

ABSTRACT OF THE DISCLOSUREMETHOD AND INSTALLATION FOR REMOVAL OF METAL CATIONS
FROM A LIQUID BY RESINS WITH POLYAZACYCLOALKANES GRAFTED
ON A SUPPORT

The invention is related to a method and an installation for removal of metal cations contained in a liquid, in which said liquid is brought into contact at a temperature greater than or equal to 60°C with a chelating
5 ion exchange resin formed from a polyazacycloalkane grafted on a solid support, said resin having been conditioned, previously to said contacting, at a pH of 4 to 6.
